

ISO 13485 Lead Implementer Training for Medical Device QMS

21 - 25 Dec 2026
Vienna

ISO 13485 Lead Implementer Training for Medical Device QMS

Ref.: 103600611_78176 **Date:** 21 - 25 Dec 2026 **Location:** Vienna **Fees:** 7500 **Euro**

Course Overview:

The ISO 13485 Lead Implementer course is a practical corporate training program designed to help professionals establish, implement, manage, monitor, and continually improve a Medical Devices Quality Management System MDQMS based on ISO 13485. This ISO 13485 Lead Implementer Training focuses on the complete implementation lifecycle, from understanding ISO 13485 requirements and medical device regulatory expectations to developing documentation, controls, risk-based processes, internal audit readiness, and certification audit preparation. The PECB course agenda positions the program across five days, covering MDQMS initiation, implementation planning, operational deployment, monitoring and improvement, and the certification exam.

Participants in this ISO 13485 Lead Implementer Course will gain applied knowledge in Medical Device Quality Management, ISO 13485 QMS Implementation, ISO 13485 Compliance Training, documentation control, product realization, supplier control, risk management, CAPA, internal controls, and audit preparation. The course is especially valuable for organizations operating in regulated medical device environments, where quality, traceability, risk control, regulatory compliance, and customer safety are critical. ISO 13485 is focused on organizations involved in one or more stages of the medical device life cycle and can also apply to suppliers and external parties that provide products or services to such organizations.

This ISO 13485 Lead Implementer Certification Course also aligns with the PECB exam competency domains, including MDQMS principles, planning, implementation, performance evaluation, continual improvement, and preparation for a certification audit.

Target Audience:

- Quality Managers and Quality Assurance Professionals
- Medical Device Compliance Managers
- Regulatory Affairs Managers and Specialists
- ISO 13485 Implementation Project Managers
- MDQMS Implementation Team Members
- Medical Device Manufacturing Managers
- Quality Control and Validation Professionals
- Internal Auditors and Audit Program Coordinators
- Consultants involved in Medical Device Quality Management
- Professionals responsible for ISO 13485 Certification Training and compliance readiness
- Healthcare technology and medical device professionals seeking ISO 13485 Medical Devices Quality Management Training

Targeted Organizational Departments:

- Quality Assurance and Quality Control Departments
- Regulatory Affairs and Compliance Departments
- Medical Device Manufacturing and Operations
- Research, Design, and Product Development
- Risk Management and Internal Controls
- Supplier Quality Management and Procurement
- Documentation Control and Records Management
- Validation, Calibration, and Metrology Teams
- Internal Audit and Corporate Governance
- Post-Market Surveillance and Complaint Handling
- Training, Competency, and Employee Awareness Teams
- Senior Management involved in ISO 13485 Quality Management System decisions

Targeted Industries:

- Medical device manufacturing
- Medical technology and healthcare equipment companies
- In vitro diagnostic device organizations
- Pharmaceutical and life sciences companies involved with medical devices
- Healthcare technology and digital health device providers
- Medical device packaging, sterilization, and distribution companies
- Component suppliers and outsourced service providers for medical device companies
- Calibration, testing, inspection, and validation service providers
- Hospitals and healthcare organizations managing regulated medical equipment
- Regulatory consulting, certification preparation, and quality advisory firms

Course Offerings:

By the end of this course, participants will be able to:

- Interpret ISO 13485 requirements and apply them to a Medical Devices Quality Management System.
- Lead ISO 13485 QMS Implementation projects from initiation to operational deployment.
- Define MDQMS scope, quality policy, quality objectives, roles, responsibilities, and governance structure.
- Conduct gap analysis and develop an ISO 13485 Implementation Course roadmap.
- Build and maintain documented information, including procedures, records, medical device files, and quality manuals.
- Apply Medical Device Risk Management principles across product realization, supplier control, production, and post-market processes.
- Design ISO 13485 Internal Controls for document management, operational control, nonconformities, CAPA, and supplier performance.
- Establish monitoring, measurement, analysis, and evaluation processes for MDQMS performance.
- Plan internal audits and prepare the organization for ISO 13485 certification audit readiness.
- Support ISO 13485 Implementation for Regulatory Compliance across medical device manufacturing, design, distribution, and service processes.
- Prepare for the PECB Certified ISO 13485 Lead Implementer exam domains and competency expectations.

Training Methodology:

The ISO 13485 Lead Implementer Training Course uses a structured, application-based methodology that combines technical explanation, guided discussion, practical exercises, case scenarios, and exam-oriented review. The course begins by building a clear understanding of ISO 13485 principles, Medical Devices Quality Management System requirements, regulatory expectations, and the relationship between ISO 13485 and ISO 9001. The training then moves into implementation planning, where participants practice defining MDQMS scope, quality objectives, gap analysis outputs, implementation responsibilities, and risk-based priorities.

Throughout the program, participants work with examples of implementation plans, document control structures, process maps, risk registers, audit checklists, CAPA workflows, supplier evaluation criteria, and management review inputs. The methodology reflects the practical focus of ISO 13485 Medical Devices Training by linking each clause to real medical device business processes such as design and development, purchasing, production, traceability, customer communication, complaint handling, and regulatory reporting. The NQA implementation guide emphasizes process-based thinking, risk-based audits, product realization, resource management, and measurement, analysis, and improvement, which are incorporated into the course flow.

The final stage focuses on certification audit preparation and exam readiness, using domain-based review, sample question discussion, and applied scenarios aligned with the PECB competency domains. Tools are not provided as deliverables; however, participants are exposed to practical insights and examples of relevant tools, templates, and checklists used in ISO 13485 QMS Implementation.

Course Toolbox:

- ISO 13485 implementation roadmap examples
- MDQMS gap analysis structure
- ISO 13485 clause-to-process mapping examples
- Quality policy and quality objectives examples
- MDQMS scope definition examples
- Risk-based process control examples
- Documented information and record control examples
- Medical device file and technical documentation structure examples
- Supplier qualification and purchasing control examples
- Product realization process flow examples
- Internal audit checklist insights
- Management review agenda examples
- Nonconformity and CAPA workflow examples
- Certification audit readiness checklist insights
- PECB exam domain review guide
- Sample exam-style discussion questions

Note: The course introduces insights and examples of tools relevant to ISO 13485 implementation. Tools, software, templates, or proprietary documents are not provided unless separately agreed or requested.

Course Agenda:

Day 1: Introduction to ISO 13485 and Initiation of a MDQMS

- **Topic 1:** Course objectives, ISO 13485 Lead Implementer structure, and MDQMS implementation pathway
- **Topic 2:** ISO 13485 Quality Management System principles for medical device organizations
- **Topic 3:** Medical device regulatory framework, customer requirements, and compliance obligations
- **Topic 4:** ISO 13485 terminology, medical device life cycle, and quality management concepts
- **Topic 5:** Initiating a Medical Devices Quality Management System implementation project
- **Topic 6:** Understanding ISO 13485, ISO 9001 relationship, process approach, and regulatory focus
- **Reflection & Review:** Review of ISO 13485 Medical Devices Training foundations, MDQMS principles, and exam Domain 1 alignment

Day 2: Plan the Implementation of a MDQMS

- **Topic 1:** Understanding the organization, interested parties, regulatory context, and quality objectives
- **Topic 2:** Conducting ISO 13485 gap analysis and evaluating the existing management system
- **Topic 3:** Defining MDQMS scope, boundaries, applicability, and implementation priorities
- **Topic 4:** Establishing quality policy, quality objectives, roles, responsibilities, and management commitment
- **Topic 5:** Planning resources, competence, infrastructure, work environment, and contamination controls
- **Topic 6:** Developing the ISO 13485 QMS Implementation project plan and risk-based implementation roadmap
- **Reflection & Review:** Review of planning outputs, gap analysis results, MDQMS scope, and exam Domain 3 alignment

Day 3: Implementation of a MDQMS

- **Topic 1:** Defining the document management process, records control, and documented information lifecycle
- **Topic 2:** Designing ISO 13485 Internal Controls for procedures, operational risks, and process effectiveness
- **Topic 3:** Product realization controls: customer requirements, design and development, purchasing, and production
- **Topic 4:** Supplier controls, outsourced processes, purchasing information, verification, and quality agreements
- **Topic 5:** Medical Device Risk Management, traceability, software validation, monitoring equipment, and process validation
- **Topic 6:** Communication plan, training and awareness plan, and operational transition of the MDQMS
- **Reflection & Review:** Review of ISO 13485 Implementation for Regulatory Compliance and exam Domain 4 alignment

Day 4: MDQMS Monitoring, Measurement, Continuous Improvement and Certification Audit Preparation

- **Topic 1:** Monitoring, measurement, analysis, and evaluation of MDQMS performance
- **Topic 2:** Internal audit planning, audit frequency, audit evidence, and risk-based audit approach
- **Topic 3:** Management review inputs, outputs, quality objectives, and performance decision-making
- **Topic 4:** Control of nonconforming product, complaint handling, corrective action, preventive action, and CAPA
- **Topic 5:** Continual improvement of a Medical Device Quality Management System Course environment
- **Topic 6:** Preparing for Stage 1 and Stage 2 ISO 13485 certification audits and audit follow-up actions
- **Reflection & Review:** Review of monitoring, improvement, certification audit readiness, and exam Domains 5, 6, and 7 alignment

Day 5: Certification Exam Preparation and Exam

- **Topic 1:** Review of PECB Certified ISO 13485 Lead Implementer exam structure and competency domains
- **Topic 2:** Domain 1 and Domain 2 review: MDQMS principles, ISO 13485 requirements, and quality management concepts
- **Topic 3:** Domain 3 and Domain 4 review: planning and implementing a MDQMS based on ISO 13485
- **Topic 4:** Domain 5 and Domain 6 review: performance evaluation, monitoring, measurement, and continual improvement
- **Topic 5:** Domain 7 review: certification audit preparation, audit evidence, Stage 1, Stage 2, and follow-up readiness
- **Topic 6:** Exam-taking guidance, scenario-based question practice, and final clarification session
- **Reflection & Review:** Final review of ISO 13485 Lead Implementer Certification Course outcomes and certification exam readiness

FAQ:

What specific qualifications or prerequisites are needed for participants before enrolling in the course?

Participants should have a basic understanding of quality management principles, medical device operations, regulatory requirements, or ISO management system concepts. Prior experience in quality assurance, regulatory affairs, medical device manufacturing, internal auditing, compliance, risk management, or process improvement is recommended. The syllabus notes that participants typically benefit from having a good understanding of quality management principles and the medical device industry.

How long is each day's session, and is there a total number of hours required for the entire course?

Each day's session is generally structured to last around 4-5 hours, with breaks and interactive activities included. The total course duration spans five days, approximately 20-25 hours of instruction.

Is ISO 13485 Lead Implementer the same as ISO 13485 Lead Auditor?

No. ISO 13485 Lead Implementer focuses on establishing, implementing, managing, maintaining, monitoring, and improving a Medical Devices Quality Management System. ISO 13485 Lead Auditor focuses more on auditing an existing MDQMS against ISO 13485 requirements. This course is aligned with the PECB Certified ISO 13485 Lead Implementer exam, which evaluates implementation, monitoring, continual improvement, and certification audit preparation competencies.

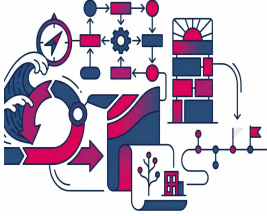

How This Course is Different from Other ISO 13485 Lead Implementer Courses:

This ISO 13485 Lead Implementer course stands out because it is not limited to explaining ISO 13485 clauses; it translates the standard into a practical implementation pathway for real medical device organizations. The course connects ISO 13485 Requirements Training with implementation planning, operational controls, documentation, risk management, product realization, supplier control, internal audit readiness, management review, CAPA, and certification audit preparation. Instead of treating ISO 13485 as a theoretical quality standard, the course focuses on how an organization can build and maintain a working Medical Devices Quality Management System that supports safe, effective, and compliant medical devices.

The course is also structured around the official PECB Lead Implementer journey. It reflects the five-day agenda covering MDQMS initiation, planning, implementation, monitoring and improvement, and certification exam preparation. It also integrates the seven PECB exam domains, including MDQMS principles, implementation planning, implementation execution, performance evaluation, continual improvement, and certification audit readiness.

Another differentiator is the strong workplace application focus. Participants explore practical examples of ISO 13485 QMS Implementation, Medical Device Regulatory Compliance, ISO 13485 Internal Controls, Medical Device Risk Management, documented information, supplier controls, traceability, product realization, and nonconformity treatment. This makes the course highly relevant for medical device companies preparing for implementation, audit readiness, regulatory alignment, or improvement of an existing ISO 13485 Quality Management System.

WHO WE ARE

Agile Leaders is a renowned training center with a team of experienced experts in vocational training and development. With 20 years of industry experience, we are committed to helping executives and managers replace traditional practices with more effective and agile approaches.

OUR VISION

We aspire to be the top choice training provider for organizations seeking to embrace agile business practices. As we progress towards our vision, our focus becomes increasingly customer-centric and agile.

OUR MISSION

We are dedicated to developing value-adding, customer-centric agile training courses that deliver a clear return on investment. Guided by our core agile values, we ensure our training is actionable and impactful.

WHAT DO WE OFFER

At Agile Leaders, we offer agile, bite-sized training courses that provide a real-life return on investment. Our courses focus on enhancing knowledge, improving skills, and changing attitudes. We achieve this through engaging and interactive training techniques, including Q&As, live discussions, games, and puzzles.
