Addis Ababa

Advanced Healthcare Environmental Cleaning and Disinfection Training Course

Ref: 1325_224488 **Date:** 22 – 26 March 2027 **Location:** Addis Ababa **Fees:** 4500 Euro

Overview

Advanced Healthcare Environmental Cleaning and Disinfection Training Course is a one-week course for environmental services leaders, infection prevention teams, nursing supervisors, facilities managers, quality personnel, occupational health practitioners, and contractors who leave with a Healthcare Cleaning Assurance File. Participants connect risk zoning, cleaning sequences, product use, isolation response, competency, contractor controls, monitoring, and corrective action across hospitals and ambulatory facilities. Agile Leaders Training Center presents healthcare environmental cleaning and disinfection as a coordinated patient-safety discipline.

Who Should Attend

- Functions responsible for environmental cleaning service design and supervision
- Teams responsible for infection prevention and environmental risk controls
- Personnel responsible for nursing, facilities, and equipment-cleaning interfaces
- Functions responsible for quality monitoring, audit, and corrective action
- Contract-management teams responsible for outsourced cleaning services

The course assumes participants already oversee healthcare cleaning, infection controls, facilities, quality, or contractors, and it leaves out introductory housekeeping and sterilization of critical devices.

Departments and Industries

The course supports departments and industries that provide, supervise, or assure environmental cleaning in patient-care settings.

- Hospitals and ambulatory care facilities
- Long-term care and rehabilitation services
- Environmental services and facilities departments
- Infection prevention, nursing, and occupational health functions
- Healthcare quality and contracted cleaning services

Learning Objectives

By the end of this course, participants will be able to:

- Analyze patient-care areas and assign cleaning risk zones
- Build surface, equipment, and responsibility schedules
- Evaluate cleaning products, dilution, contact time, and safe handling
- Apply routine, terminal, isolation, and outbreak cleaning sequences
- Use competency, observation, and monitoring evidence
- Prioritize contractor controls and corrective actions

Course Agenda

Day 1: Risk-Based Cleaning Governance

- Patient-Care Area Risk Zoning Matrix
- Environmental Transmission Pathway Map
- Cleaning Governance and Accountability Framework
- Surface and Equipment Responsibility Schedule
- Cleaning Service Risk Register

Day 2: Products, Methods and Safe Use

- Cleaning Versus Disinfection Decision Guide
- Product Suitability and Material Compatibility Matrix
- Dilution, Contact Time, and Storage Checklist
- Personal Protective Equipment Task Assessment
- Cross-Contamination Prevention Sequence

Day 3: Clinical Cleaning Protocols

- Routine Patient-Zone Cleaning Procedure
- High-Touch Surface Frequency Schedule
- Noncritical Equipment Cleaning Interface Map
- Terminal Cleaning and Room Release Checklist
- Spill and Body-Fluid Response Method

Day 4: Isolation, Competency and Assurance

- Isolation and Outbreak Escalation Protocol
- Cleaner Competency Observation Tool
- Technical Cleanliness Monitoring Plan
- Contractor Performance and Evidence Scorecard
- Finding, Feedback, and Corrective Action Log

Day 5: Healthcare Cleaning Assurance Practice

- Exercise: Risk Zoning and Frequency Design
- Exercise: Product and Cleaning Sequence Decision Case
- Exercise: Terminal and Isolation Response Review
- Exercise: Monitoring and Contractor Assurance Analysis
- Capstone Exercise: Healthcare Cleaning Assurance File

Practical Exercises

The course uses suggested activities based on hospital, ambulatory, long-term care, and contracted-service scenarios.

- Suggested activity: classify care areas and convert risk evidence into responsibilities, frequencies, and cleaning specifications.
- Suggested activity: select a safe product-use method for surfaces, contamination conditions, and required contact time.
- Suggested activity: review terminal and isolation cleaning evidence before room release.
- Suggested activity: combine competency, monitoring, feedback, and contractor evidence into an improvement plan.

FAQs

What is healthcare environmental cleaning and disinfection?

Healthcare environmental cleaning and disinfection is the controlled removal of soil and reduction of harmful microorganisms on patient-care surfaces and noncritical equipment through risk-based methods, responsibilities, schedules, products, and verification.

Who suits advanced healthcare environmental cleaning and disinfection training and what does it assume?

Advanced healthcare environmental cleaning and disinfection training suits experienced environmental services, infection prevention, nursing, facilities, quality, occupational health, and contractor-management personnel. It assumes operational responsibility for cleaning controls.

How does advanced healthcare environmental cleaning differ from basic housekeeping training?

Advanced healthcare environmental cleaning integrates infection risk, patient zones, product decisions, contact time, isolation response, competency, monitoring, contractor assurance, and corrective action. Basic housekeeping training usually emphasizes routine task execution.

When is disinfection required in healthcare environmental cleaning?

Disinfection is used when the care-area risk, contamination, patient circumstances, or facility protocol calls for microbial reduction after effective cleaning. Product instructions and required contact time govern its safe application.

How should healthcare cleaning effectiveness be monitored?

Healthcare cleaning effectiveness should be monitored through defined standards, direct observation, checklist evidence, technical cleanliness measures where appropriate, trend review, staff feedback, and documented corrective action.

Conclusion

The course integrates risk zoning, responsibilities, products, methods, clinical sequences, isolation response, competency, monitoring, and contractor assurance. Participants take back a Healthcare Cleaning Assurance File containing protocols, schedules, evidence tools, decisions, and corrective actions. The file changes how healthcare teams coordinate environmental services with infection prevention and quality improvement.
