NFPA 1031 Fire Inspector and Plan Examiner Training Course

Ref: 1907_241982 **Date:** 21 – 25 February 2027 **Location:** Amman **Fees:** 4100 Euro

Overview

NFPA 1031 Fire Inspector and Plan Examiner Training Course is a one-week course for fire safety officers, plan examiners, building inspectors, and HSE engineers who need a Fire Inspection and Plan Review File. Disjointed inspection checklists and incomplete drawing reviews create life safety risks, licensing delays, and design non-compliance. The course connects technical code references, occupant load calculations, means of egress verification, fire protection system submittals, and field inspection audits into a structured compliance process. Agile Leaders Training Center delivers this course on fire inspection and plan examination.

Who Should Attend

- Personnel responsible for reviewing architectural drawings, occupant loads, and egress layouts
- Engineers responsible for evaluating fire alarm, sprinkler, and suppression system submittals
- Officers responsible for conducting occupancy inspections and annual fire safety compliance audits
- Consultants responsible for preparing technical defense submittals and authority approval packages
- Safety managers responsible for workplace fire hazard assessments and operational permits

The course assumes participants already read basic architectural drawings and work with facility safety documentation, and it leaves out initial firefighting tactics, fire suppression equipment installation, structural civil engineering, and vendor product sales.

Departments and Industries

The course supports inspection and engineering functions across commercial real estate, industrial manufacturing, petrochemical processing, healthcare, logistics, and hospitality.

- Fire protection and life safety engineering departments
- Building inspection and code compliance teams
- Occupational health, safety, and environment divisions
- Facility management and infrastructure operations
- Real estate development and architectural consulting firms

Learning Objectives

By the end of this course, participants will be able to:

- Apply NFPA 1031 and NFPA 1030 job performance requirements to field audits
- Analyze architectural drawings for means of egress, travel distance, and occupant load compliance
- Evaluate water-based sprinkler and fire alarm submittals against SBC 801 and NFPA standards
- Diagnose passive compartmentation defects, fire door deficiencies, and hazardous material storage breaches
- Prioritize life safety corrective actions using structured inspection reports and compliance matrices
- Build a plan examination verification checklist for regulatory safety approval submissions

Course Agenda

Day 1: Codes, Classifications, and Professional Qualifications

- NFPA 1031 and NFPA 1030 Professional Qualifications Mapping
- SBC 801 and NFPA 1 Code Administration Framework
- Occupancy Classification and Construction Type Determination Matrix
- Fire Hazard Assessment and Risk Ranking Tool
- Statutory Authority and Inspection Protocol Sheet

Day 2: Means of Egress and Architectural Plan Review

- Occupant Load Calculation and Exit Capacity Formula
- Egress Component, Travel Distance, and Common Path Analysis
- NFPA 101 and SBC 201 Life Safety Plan Review Checklist
- Fire Compartmentation, Barrier, and Opening Protectives Schedule
- Emergency Lighting and Exit Signage Verification Layout

Day 3: Fire Protection and Signaling Systems Examination

- NFPA 13 and SBC 801 Sprinkler Plan and Hydraulic Review Template
- NFPA 72 Fire Alarm, Detection, and Notification Schedule
- Cause-and-Effect Matrix and Standby Battery Calculation Audit
- Standpipe, Fire Pump, and Water Supply Flow Test Sheet
- Clean Agent and Specialized Suppression Submittal Register

Day 4: Field Inspection, Audit, and Defect Resolution

- NFPA 25 Water-Based System Inspection and Maintenance Log
- Hazardous Materials Storage and Flammable Liquid Review Map
- Electrical, Heating, and Mechanical Hazard Verification Guide
- Salamah Platform Documentation and Approval Workflow Matrix
- Non-Conformance Notice and Corrective Action Plan Form

Day 5: Plan Examination and Field Inspection Practice

- Suggested Exercise: Evaluate Occupant Loads and Egress Deficiencies on Shop Drawings
- Suggested Exercise: Review Fire Sprinkler and Alarm Shop Drawing Submittals
- Suggested Exercise: Formulate a Field Non-Conformance Report for an Existing Facility
- Suggested Exercise: Resolve Audit Deficiencies for Civil Defense Operating Licensing
- Capstone Exercise: Produce a Fire Inspection and Plan Review File

Practical Exercises

The course uses suggested activities to convert code clauses and technical submittals into defensible inspection findings.

- Suggested activity: calculate occupant loads, exit capacities, and travel distances across mixed-occupancy building plans
- Suggested activity: cross-reference sprinkler shop drawings and fire alarm cause-and-effect schedules against SBC 801 and NFPA criteria
- Suggested activity: audit field inspection photographs to identify passive compartmentation breaches and hazardous storage non-conformances
- Suggested activity: compile an inspection verification record with required corrective actions for authority licensing

FAQs

Who suits NFPA 1031 Fire Inspector and Plan Examiner training and what does it assume?

NFPA 1031 Fire Inspector and Plan Examiner training suits engineers, safety officers, and plan reviewers auditing buildings for code compliance. It assumes familiarity with construction drawings and workplace safety documents, leaving out live fire suppression and equipment installation.

How does NFPA 1031 training differ from general fire prevention training?

NFPA 1031 training focuses on technical plan examination, code verification, active and passive system submittal reviews, and regulatory inspection procedures. General fire prevention training focuses on basic fire extinguisher operation, immediate evacuation drills, and routine workplace housekeeping.

What standards govern the transition from NFPA 1031 to NFPA 1030?

NFPA 1030 consolidates qualifications from NFPA 1031, establishing requirements for Certified First Responder Inspectors and Certified Fire Inspectors. Plan examiners and inspectors apply these job performance requirements alongside NFPA 1, NFPA 13, NFPA 72, NFPA 101, and SBC 801.

How are fire alarm cause-and-effect matrices evaluated during plan examination?

Plan examiners evaluate cause-and-effect matrices by cross-referencing detection inputs with automated outputs, such as fan shutdown, damper closure, stairwell pressurization, door release, and emergency notification, ensuring sequences align with life safety requirements.

Conclusion

Participants take back a Fire Inspection and Plan Review File containing plan examination checklists, egress calculation sheets, system verification templates, and inspection audit forms. The file establishes a consistent method for evaluating technical drawings and verifying physical facility compliance against binding codes. It eliminates regulatory resubmission delays and strengthens life safety governance across all stages of building occupancy.
