Mastering Montessori Education: Training for Educators and Caregivers

Ref: 36339_96247 **Date:** 15 – 19 March 2027 **Location:** Tbilisi **Fees:** 5700 Euro

Overview

Early childhood learning environments require structured pedagogical design to foster self-directed inquiry, sensory refinement, and cognitive development. This programme equips instructional practitioners with methods to implement Montessori education across diverse developmental stages. Participants explore prepared environment design, didactic material sequences, observational charting frameworks, and mixed-age classroom management strategies that support learner autonomy. Practitioners exit with functional classroom layout templates, observation records, and lesson sequencing plans. This course is delivered by Agile Leaders Training Center.

Who Should Attend

- Practitioners responsible for preparing classroom learning environments and organising didactic sensory materials.
- Caregivers responsible for supporting personal independence routines and fine motor skill development in domestic and nursery settings.
- Instructional coordinators responsible for designing mixed-age curriculum sequences and multi-sensory learning pathways.
- Lead mentors responsible for observing learner engagement levels and tracking developmental milestones across early childhood stages.
- Nursery administrators responsible for establishing quality benchmarks and inclusive early education practices across centres.

Departments and Industries

This course supports professionals guiding foundational learning and developmental care across multiple educational and human service sectors.

- Early Childhood Education Units in Private and Independent Schools
- Childcare and Nursery Operations within Healthcare and Hospital Staff Centres
- Early Intervention Services within Community and Social Development Organisations
- Preschool Learning Divisions in Corporate Childcare Facilities
- Pedagogical Development Departments in Non-Profit Foundation Nurseries

Learning Objectives

By the end of this course, participants will be able to:

- Apply prepared environment principles to organise accessible sensory learning stations.
- Evaluate early developmental stages using three-period lesson observation templates.
- Build sequential practical life exercises supporting fine motor coordination and autonomy.
- Diagnose developmental hurdles using systematic behavioral tracking charts.
- Prioritise didactic sensorial materials based on individual cognitive readiness indicators.
- Construct mixed-age classroom routines that maintain positive group discipline without extrinsic rewards.

Course Agenda

Day 1: Foundations of the Prepared Environment and Child Development

- Four Planes of Development Framework using Age-Stage Milestone Matrices
- Prepared Environment Architecture using Spatial Accessibility and Order Layouts
- Role of the Adult Guide using Non-Intrusive Presence and Modeling Protocols
- Development of the Will using Sensitive Periods Identification Guides
- Physical Room Staging using Child-Scale Furniture and Material Storage Schemas

Day 2: Practical Life Curriculum and Independence Cultivation

- Preliminary Movement Exercises using Pouring, Spooning, and Grasping Trays
- Care of the Person Workflows using Dressing Frames and Personal Hygiene Stations
- Care of the Environment Protocols using Polishing, Sweeping, and Food Preparation Tasks
- Grace and Courtesy Instruction using Role-Playing Etiquette Lesson Cards
- Movement Coordination Analysis using Control of Movement Balance Line Activities

Day 3: Sensorial Education and Perceptual Refinement

- Visual Dimension Exploration using Pink Tower and Broad Stair Grading Sequences
- Tactile Refinement Techniques using Rough and Smooth Boards and Fabric Sorting Trays
- Auditory Discrimination Practice using Sound Cylinder Matching Sets
- Baric and Thermic Sensation Workflows using Pressure Weight Slates and Metal Tablets
- Geometric Sense Induction using Cabinet of Insets and Constructive Triangles

Day 4: Early Language, Mathematics, and Cultural Integration

- Phonemic Awareness Scaffolding using Sandpaper Letters and Moveable Alphabets
- Concrete Quantity Association using Number Rods and Spindle Box Counter Systems
- Decimal System Introduction using Golden Bead Base-Ten Demonstration Trays
- Cosmic Education Concepts using Botany Puzzle Leaf Cabinets and Geography Globes
- Three-Period Lesson Execution using Naming, Recognition, and Recall Rubrics

Day 5: Classroom Observation, Management, and Program Integration

- Systematic Observation Methodology using Qualitative Behavioural Running Records
- Mixed-Age Group Facilitation using Peer Tutoring and Self-Regulation Norms
- Normalization Tracking using Work Cycle Engagement and Focus Duration Sheets
- Parent Communication Strategy using Progress Portfolio and Narrative Reporting Formats
- Capstone Practical Environment Design and Demonstration Lesson Portfolio

Practical Exercises

Participants complete applied tasks to create practical classroom assets and observational routines.

- Suggested activity: Design a prepared shelf layout incorporating visual harmony and self-correcting sensorial materials.
- Suggested activity: Draft a three-period lesson plan targeting language sound discrimination for emerging readers.
- Suggested activity: Map a practical life exercise sequence specifying fine motor controls and independence milestones.
- Suggested activity: Evaluate a recorded classroom scenario using a running observation record format.

FAQs

What age groups are addressed during this course?

The syllabus prioritises the primary foundation phase covering ages three to six, while contextualising developmental progressions from infant-toddler environments through the transition into early elementary stages.

How are self-correcting learning materials examined?

Participants explore the mechanical and visual control of error inherent in didactic apparatus, examining how materials isolate specific qualities and allow learners to correct mistakes independently without adult intervention.

Are traditional reward systems included in this methodology?

Instruction focuses on cultivating intrinsic motivation, self-discipline, and concentration through purposeful work cycles, replacing external reward charts and punitive measures with structured grace and courtesy protocols.

What observational techniques will participants practice?

Attendees practice non-intrusive running records, milestone mapping grids, and engagement tracking sheets, learning to record objective developmental data without disrupting student concentration.

Conclusion

Participants return to their centres with the technical capability to curate structured, independent learning spaces. By deploying didactic materials, purposeful work cycles, and rigorous observation frameworks, educators and caregivers foster intrinsic motivation, cognitive clarity, and social cooperation across early childhood learning communities.
